

Client Diversifies Single-Stock Concentration Using a Custom Core® Completion Portfolio

CHALLENGE

An investor with a large, appreciated position in a technology stock from his former employer wanted to reduce risk over time.

SOLUTION

We prepared a staged diversification program that used losses from the Custom Core portfolio to help offset taxes from the sale of the tech stock.

RESULTS

Building a broad-cap Custom Core portfolio around the tech holding helped reduce the investor's risk and tax exposure.

Challenge

An advisor's prospective client had a large position in a technology stock from his former employer. The client wanted to diversify to broad-cap equity exposure, but the technology stock had sizable gains and made up a large portion of his investable assets. The advisor wanted to provide a solution to help reduce the concentration over time and build a portfolio around the technology exposure.

The technology stock had sizable gains and made up a large portion of the client's investable assets.

Parametric solution

Parametric's staged diversification tool offered a plan for reducing the technology-stock position over time and investing the proceeds in a Custom Core® account. We adjusted the length of the staged diversification to meet the client's desire to reduce the position while spreading the realization of gains over multiple years.

Realized losses in the Custom Core portfolio can be used to reduce taxes from the sale of the concentrated technology stock.

The Custom Core account provides the broad-cap exposure while building the portfolio around the concentrated stock position. Since the client had exposure to technology from the concentrated position, the portfolio excludes the technology sector. Over time the portfolio managers can work with the advisor to adjust the target exposure as the client reduces his position in the technology stock. Realized losses in the Custom Core portfolio can be used to reduce taxes resulting from the sale of the concentrated technology stock.

Results

By building a broad-cap Custom Core account around the client's technology stock, we helped diversify the client's portfolio without incurring the taxes of fully liquidating the position. Over time the move from the concentrated technology stock to a diversified broad-cap exposure will reduce the portfolio's specific risk. And as losses are harvested in the Custom Core account, they can be used to offset the gains from the sale of the concentrated position, helping the client tax-efficiently diversify over time.

At Parametric, we manage more than \$134 billion in assets in Custom Core accounts alone, with \$110 billion in client-specified tax mandates.* Harvesting losses while maintaining adherence to the client's desired benchmark is a critical component of our comprehensive approach to tax management.

We helped diversify the client's portfolio without incurring the taxes of fully liquidating the position.

Parametric Portfolio Associates® LLC ("Parametric"), headquartered in Seattle, is registered as an investment advisor with the US Securities and Exchange Commission under the Investment Advisers Act of 1940. Parametric is a leading global asset management firm, providing investment strategies and customized exposure management directly to institutional investors and indirectly to individual investors through financial intermediaries. Parametric offers a variety of rules-based investment strategies, including alpha-seeking equity, fixed income, alternative, and options strategies. Parametric also offers implementation services, including customized equity, traditional overlay, and centralized portfolio management. Parametric is part of Morgan Stanley Investment Management, the asset management division of Morgan Stanley, and offers these capabilities through offices located in Seattle, Boston, Minneapolis, New York City, and Westport, Connecticut.

There is no assurance that a separately managed account ("SMA") will achieve its investment objective. SMAs are subject to market risk, which is the possibility that the market values of the securities in an account will decline and that the value of the securities may therefore be less than what you paid for them. Market values can change daily due to economic and other events (e.g. natural disasters, health crises, terrorism, conflicts and social unrest) that affect markets, countries, companies or governments. It is difficult to predict the timing, duration, and potential adverse effects (e.g. portfolio liquidity) of events. Accordingly, you can lose money investing in an SMA.

Investment strategies that seek to enhance after-tax performance may be unable to fully realize strategic gains or harvest losses due to various factors. Market conditions may limit the ability to generate tax losses. Tax-loss harvesting involves the risks that the new investment could perform worse than the original investment and that transaction costs could offset the tax benefit. Also, a tax-managed strategy may cause a client portfolio to hold a security in order to achieve more favorable tax treatment or to sell a security in order to create tax losses. Prospective investors should consult with a tax or legal advisor before making any investment decision.
